DETAILED ACTION

Election/Restrictions

1. Applicant's election of claims 1-6, 20, 32, 33, and 35 in the reply filed on 11/13/06 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Objections

2. Claims 2-6 and 20 are objected to because of the following informalities: In **claim 2**, line 2, "each of" is objected to because there is only "at least one lever", therefore it is suggested to delete "each of"; In **claim 3**, line 1, "each of" is objected to because there is only "at least one lever", therefore it is suggested to delete "each of". Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1-5, 20, 32, 33, and 35 are rejected under 35 U.S.C. 102(e) as being anticipated by Amatucci et al. (US 6,467,761 B1).

Application/Control Number: 10/761,585

Art Unit: 3726

Regarding <u>claim 1</u>, Amatucci discloses a small-scale positioning device comprising a fixed frame (206); a platform (202), movably attached to the fixed frame via at least one lever (203a, 203b); and a floating actuator (210) device, coupled between the at least one lever and the platform, that when activated generates a force on the platform (202) and an equal but opposite force on the at least one lever (203a, 203b), thereby controlling the position of the movable platform relative to the fixed frame.

Regarding <u>claim 2</u>, Amatucci discloses each of the at least one lever (203a) is coupled to the platform at a respective fulcrum (205a).

Regarding <u>claim 3</u>, Amatucci discloses each of the at least one lever (203a) is further pivotably connected to the platform via a respective flexure (211a), the flexure (211a) being separate from the fulcrum (205a).

Regarding <u>claim 4</u>, Amatucci inherently discloses that the floating actuator device (210) is of an automated type since the input force is generated for movement in the direction of the Y-axis of the moving stage by the actuator (210).

Regarding <u>claim 5</u>, Amatucci discloses the floating actuator device is a piezoelectric type (col. 2, lines 1-2).

Regarding <u>claim 20</u>, Amatucci discloses the platform (202) may be repositioned in only a single degree of freedom of motion.

Regarding <u>claim 32</u>, Amatucci discloses a method of positioning a platform (202) relative to a fixed frame (206) in a small-scale positioning device, comprising: providing a small-scale positioning device having a fixed frame (206), a platform (202) that is

Application/Control Number: 10/761,585 Page 4

Art Unit: 3726

movably attached to the fixed frame via at least one lever (203a, 203b), and a floating actuator device (210), coupled between the at least one lever (203a, 203b) and the platform (202); activating the floating actuator device (210); and upon activating the floating actuator device (210), applying a force on the platform (202) and an equal but opposite force on the at least one lever (203a, 203b), thereby controlling the position of the movable platform (202) relative to the fixed frame (206).

Regarding <u>claim 33</u>, Amatucci discloses wherein controlling the position of the movable platform (202) relative to the fixed frame (206) includes controlling motion of the movable platform (202) relative to the fixed frame in one degree of freedom.

Regarding <u>claim 35</u>, Amatucci discloses wherein the step of providing a small-scale positioning device includes providing a small-scale positioning device (200) having at least one flexure (203a) coupled between the platform (202) and the fixed frame (206), the method further comprising: guiding the motion of the platform in one degree of freedom via the at least one flexure (203a).

See column 8, line 62 - column 9, line 38 and figure 2 for further clarification.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Amatucci et al. (US 6,467,761 B1) in view of Applicants' Admitted Prior Art (AAPA).

Amatucci discloses all of the claimed subject matter except for the piezoelectric actuator device including an actuator formed from a relaxor material.

AAPA discloses at page 1, paragraph [0003], that it is known for a piezoelectric actuator device to include an actuator formed from a relaxor material, and provide a relatively high amount of work while occupying a small volume.

Therefore, it would have been obvious to one having ordinary skill in the art at the invention was made to form the piezoelectric actuator device of Amatucci from a relaxor material, in light of the teachings of AAPA, in order to provide a device capable of producing high amount of work while occupying a small volume.

Conclusion

- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The reference cited on the attached PTO-892 is cited to show a positioning stage apparatus.
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jermie Cozart whose telephone number is 571-272-4528. The examiner can normally be reached on Monday-Thursday, 7:30 am 6:00 pm.
- 9. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Bryant can be reached on 571-272-4526. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

10. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
